

CSE4086

HW3

Due Date: 30.11.2018

Using the techniques you learned in Chapter 10 (1st Edition), create an app that allows you to enter information about your movie collection. Provide fields for the title, year, director and any other fields you'd like to track. The app should provide similar activities to the Address Book app for viewing the list of movies (in alphabetical order), adding and/or updating the information for a movie and viewing the details of a movie.

Additionally, place a button with the text "Watch Trailer" on the activity that displays the details of a movie. When the user clicks that button, a browser app will be opened and it will list the results of the search performed on Youtube.

Important note (For all homeworks in this course): Your app should work a device having Android 4.1 version.
